

**RETAIL PETROLEUM COMPANY
WEST VIRGINIA, OHIO**

KEMRON is contracted with a retail petroleum company to provide environmental consulting and remediation services at 13 current and former retail petroleum sites throughout West Virginia and Ohio. These projects were transferred to KEMRON from a previous contractor due to insufficient remedial progress. Since transitioning these sites, KEMRON has obtained No Further Action (NFA) status for six sites, is awaiting regulatory concurrence for one additional site and determined the client has no continuing liability for two other sites. KEMRON personnel have conducted site investigations, corrective measures, remedial pilot testing, operation and maintenance of remediation systems, light non-aqueous phase liquid (LNAPL) hydrocarbon recovery and groundwater monitoring services for the client at their facilities.

Remediation activities performed for the client include operation and maintenance of dual phase, high vacuum extraction (DPHVE) systems, well vacuum services at selected monitoring and recovery wells using a vacuum truck, pilot testing and design of air sparge (AS)/soil vapor extraction (SVE) systems and enhanced bioremediation.

Reports generated as part of KEMRON's activities include quarterly groundwater monitoring reports, Corrective Action Plans (CAPs), initial site characterization reports, LNAPL recovery reports and environmental site assessment reports.

Representative projects include:

- Site Investigations
- LNAPL Recovery
- Groundwater Monitoring
- AS/SVE System Installation and O&M
- DPHVE System Installation and O&M
